Ad Omnia

Ad Omnia in perpetuum.

Every platform sees part of the picture.

Each one is right.
None of them is whole.

Ad Omnia gathers the light.

Each source is a ray. The lens brings them into one picture, so the people deciding see everything at once.

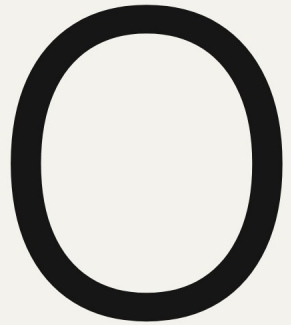

01

The mark

Two letters, one lens, one ray of light.

O + A. The whole name in two strokes.

Omnia, everything.
The lens.

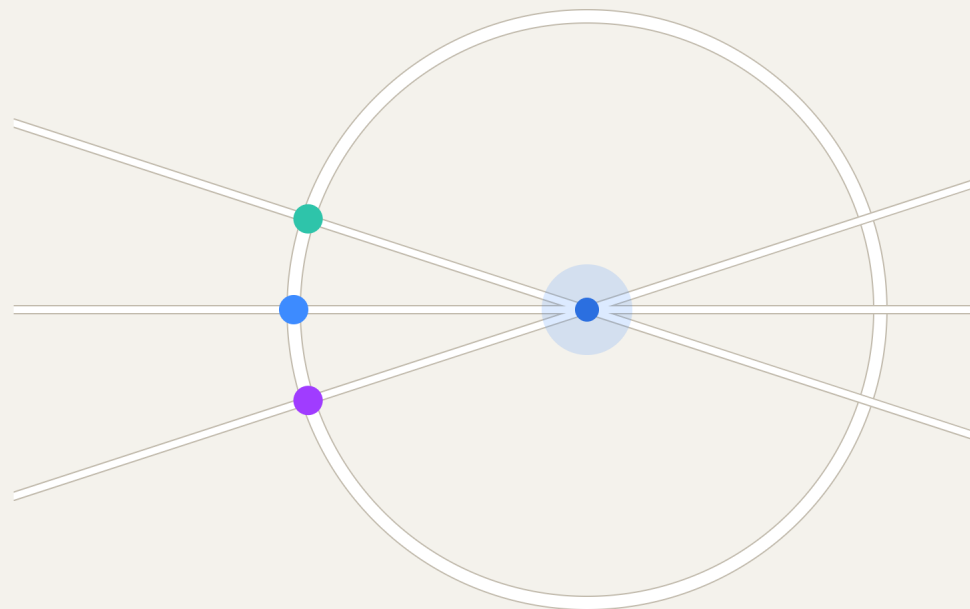

+

Ad, toward. The light.

=

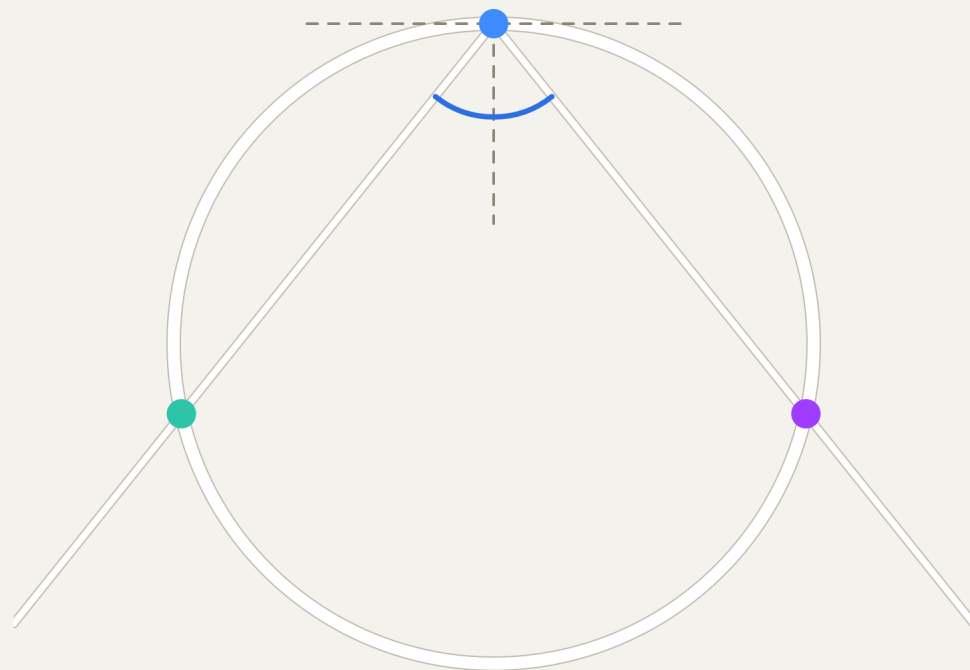

O, the lens. It makes no light of its own.

It gathers what already exists and brings it into focus. Ad Omnia owns no data either. It focuses the data Portugal already has into one point where decisions are made.

A, the light. Angle in equals angle out.

The ray strikes the top of the lens and reflects at the exact physical angle, computed off the tangent and never eyeballed.

What enters Ad Omnia is returned faithfully. The picture can sharpen the facts. It never bends them.

Anatomy of the mark

- 1 The lens**
One line runs a full lap and closes, leaving an opening for the light.
- 2 The ray**
Light enters, reflects off the top of the lens and becomes the A.
- 3 The crossbar**
A second ray bends inside the lens and stops at its peak. Insight happens inside the lens, and it knows where to stop.
- 4 The openings**
The ring breaks only where light touches it, with the same gap on both sides.

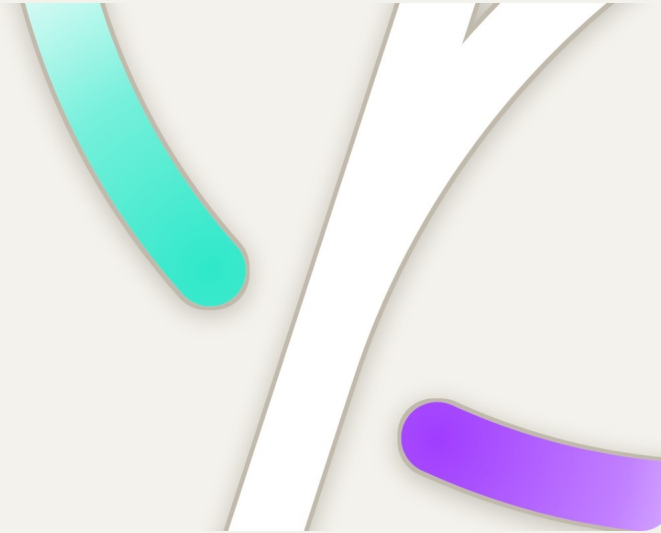

Where light meets the lens

The reflection

The ring opens around the apex with an equal gap on each side. Teal on one end, blue on the other: the two ends of an opening never share a colour.

The colour

Colour is strongest at the cut and fades into white along the ring. It never fills a whole ring and never appears where nothing touches.

The bend

The crossbar curves only inside the lens, in one smooth arc. It cuts both legs with the same gap and ends at its peak.

Light takes colour where it meets the lens.

Nothing in Ad Omnia is colourful on its own. Colour appears only where information touches the system.

The mark draws itself, always in this order.

The lens closes its lap	1.90 s
Pause	0.40 s
The ray forms the A	0.90 s
Pause	0.30 s
The crossbar bends in	0.55 s
Hold, colour fades in	0.75 s
Total	4.80 s

No easing at the reflection point. Light does not slow down.

One mark, four settings

On paper

The default. White lines with a thin warm-grey edge and a soft shadow.

On colour

Coloured openings over the light field. Profiles, avatars, covers.

Hero

Plain white over soft washes. Opening and closing slides only.

One colour

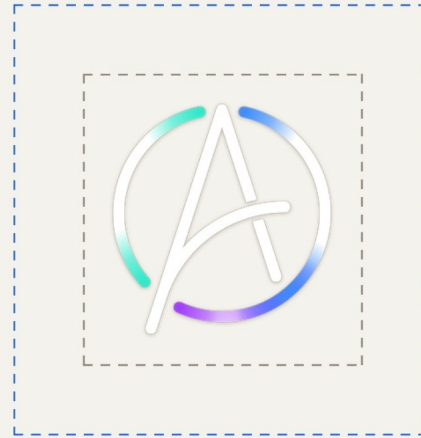

Black or white, openings kept. Favicons, print, anything under 48 px.

Using the logo

- ✓ On paper with its thin warm-grey edge. The edge only separates white from paper.

- ✓ Clear space of a quarter of the lens width on every side.

- ✓ One colour when colour is not possible, or below 48 px.

Keep the light clean

✗ Stretch, squash or rotate

✗ Recolour the lines

✗ Fill the lens

✗ Thicken the edge

✗ Add glows or effects

✗ Set text over it

02

Colour

Three lights on a calm ground.

Beginning, turning point, end

A slice of the visible spectrum, from sea green to violet: the short wavelengths of open sky and Atlantic water.

01 ENTRY

Teal #2EC4AA

Where light first meets the lens. Beginnings, first contact.

02 REFLECTION

Blue #3D8BFF

The peak of the lens, where the ray turns. The moment of decision.

03 END

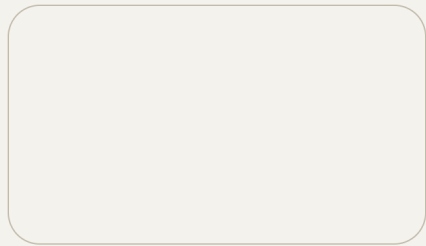

Violet #A03CFF

The last colour before light leaves the visible. Completion.

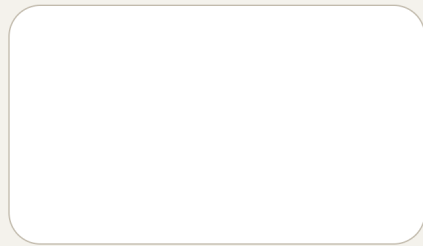

Light needs somewhere calm to land

A warm paper ground and quiet inks carry everything else, so the three lights are the only colour anyone notices.

Line

#C2BBAD

Text in colour uses the inks: **teal ink #087A68**, **blue ink #2563D0**, **violet ink #8B35E0**.

Rays obey physics

A ray only reflects off or bends inside a lens. It never curves in open space.

Rays enter and leave through the left or right edge, at one or two thirds of the height. They never start or stop on screen.

Rings open only where a ray touches them, and only the openings take colour.

Rays stay out of the way of data, charts and tables.

03

Type, icons and voice

How Ad Omnia looks when it speaks.

Two typefaces, two jobs

Icons drawn like the rays

Lucide line icons: thin, round-capped strokes at 1.75 px, from the same family of lines as the lens and the light. They stand on their own, with no box behind them.
